CB-26P Fitting position

Vauxhall Calibra/Cavalier 16v Eco

"It took me about 10 minutes to fit it, there was definite noticeable gains, including a nice little induction noise and better response in 2nd and 3rd gear. also it didn't affect the top end as I got 131mph out of it today!! Ecotek is a winner".

"I eventually found the correct pipe (here are the pics to help other owners) for the Cavalier and the device is now fitted and working perfectly! I have not been able to check the fuel consumption yet but I hope to get back to you on that soon. So far the power difference and acceleration response is amazing! It has eliminated all the flat spots and makes a satisfying noise when accelerating. Many thanks for a fantastic product, good work. Kind regards, Ryan O'Mahony."

There has been very positive feedback from owners of the 8v Calibras. With the 16v the owners tend to be pretty discerning: they say there is a noticeable improvement in response and smoothness though it is perhaps less dramatic given the 16v's much improved performance anyway.

A 16v Cally owner, Mickey, on the club-calibra site said:
