

POWER BOOST

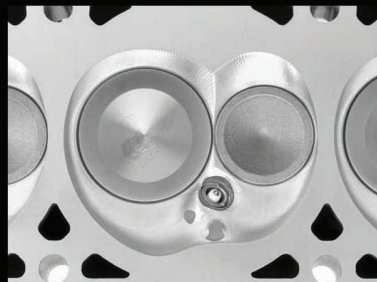

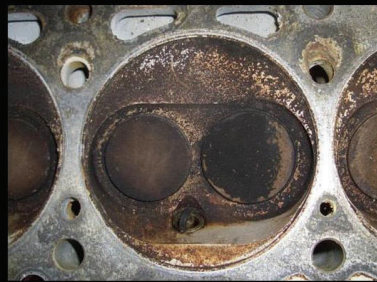

Engine Energizer

Carbon deposits absorb power by impeding airflow, absorbing heat and creating hot spots. They impair valve seating and generally reduce combustion efficiency, resulting in poor running, increased emissions and increased fuel consumption.

In severe cases accumulated Carbon deposits can cause overheating and pre-ignition resulting in engine damage.

De-Coke with PowerBoost and you could get: more engine power, crisper acceleration, better throttle response, higher top speed, reduced emissions and improved economy.

What your pistons, heads and valves should look like vs. what they probably look like now!

Maximise
Your Car's Performance!

- Cleans and Decokes
- More Engine Power
- Better Acceleration
- Increased Response
- Smoother Running
- Lower Emissions
- Improved Economy
- ...Simple to Apply
